LONG RANGE TRANSPORTATION PLAN (LRTP)

DIRECTIONAL TRIP DISTRIBUTION REPORT

This document was prepared by the Miami-Dade Transportation Planning Organization (TPO) in collaboration with the Florida Department of Transportation (FDOT) District Six, Miami-Dade Expressway Authority (MDX), Florida's Turnpike Enterprise (FTE), South Florida Regional Transportation Authority (SFRTA), Miami-Dade Department of Transportation and Public Works (DTPW), | Miami-Dade Regulatory and Economic Resources (RER) Department, Miami-Dade Aviation Department (MDAD), Miami-Dade Seaport Department, Miami-Dade County Office of Strategic Business Management, City of North Miami, City of Hialeah, City of Miami, City of Miami Beach, City of Miami Gardens, City of Homestead, Miami-Dade County Public Schools, Miami-Dade TPO Citizens' Transportation Advisory Committee (CTAC), Miami-Dade TPO Bicycle/ Pedestrian Advisory Committee (BPAC), Miami-Dade TPO Freight Transportation Advisory Committee (FTAC), Transportation Aesthetics Review Committee (TARC), Broward County Metropolitan Planning Organization (MPO), Palm Beach County Transportation Planning Agency (TPA), and the South Florida Regional Planning Council (SFRPC).

The Miami-Dade TPO complies with the provisions of Title VI of the Civil Rights Act of 1964, which states: No person in the United States shall, on grounds of race, color, or national origin, be excluded from participating in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance. It is also the policy of the Miami-Dade TPO to comply with all the requirements of the Americans with Disabilities Act (ADA). For materials in accessible format please call (305) 375-4507.

The preparation of this report has been financed in part from the U.S. Department of Transportation (USDOT) through the Federal Highway Administration (FHWA) and/or the Federal Transit Administration (FTA), the State Planning and Research Program (Section 505 and Title 23, U.S. Code), and Miami-Dade County, Florida. The contents of this report do not necessarily reflect the official views or policy of the U.S. Department of Transportation.

DIRECTIONAL TRIP DISTRIBUTION REPORT

INTRODUCTION

This memorandum describes the computerized process developed and the assumptions used to produce the directional trip distribution from each Traffic Analysis Zone (TAZ) and to present the results in the attached Appendices. The computerized process was designed to provide a summary of the daily vehicle trips split into eight cardinal directions for each of the 1,506 internal Southeast Regional Planning Model (SERPM) TAZs representing the Miami-Dade urban area. The summary generated by the process provides an estimate of travel in each cardinal direction for each individual zone using the sketch planning technique described below.

DIRECTIONAL TRIP DISTRIBUTION PROCESS

The directional trip distribution process was structured as a stand-alone, post-process utility for the Southeast Regional Planning Model (SERPM). The current SERPM v8.0 was developed within the Florida Standard Urban Transportation Model Structure (FSUTMS), using Cube Voyager and the Coordinated Travel – Regional Activity Based Modeling Platform (CT-RAMP) software. The directional trip distribution process is based on a FORTRAN program utility once developed to post-process previous SERPM versions within FSUTMS/Cube Voyager, prior to the incorporation of CT-RAMP, to summarize vehicle trip cardinal distributions. A new process has now been developed as a SERPM v8.0 post-process comprised of just Cube Voyager scripts with the use of an Access database for converting / summarizing some of the CT-RAMP outputs.

There are several inputs required by the cardinal based directional trip distribution process which fall into three main categories including the number of SERPM internal transportation analysis zones (TAZs); the “X-Y” geographic coordinates file, which describes the location of each TAZ / zonal centroid; and a summarized matrix of the daily vehicle trips including those created from the CT-RAMP outputs in its portion of the model chain and other trips external to the CT-RAMP process.

The directional trip distribution process is designed to identify and summarize the trip direction of travel from each internal TAZ to all other possible destination TAZs. Trips associated with each of the TAZ pairs are assigned to one of eight cardinal directions. Each cardinal direction consists of a 45-degree wedge of the compass as formed by the intersection of eight major compass bearings and are defined as follows:

- NNE - between North and Northeast
- ENE - between East and Northeast
- ESE - between East and Southeast
- SSE - between South and Southeast
- SSW - between South and Southwest
- WSW - between West and Southwest
- WNW - between West and Northwest
- NNW - between North and Northwest

The cardinal direction of each TAZ pair (trip interchange) is defined as a simple crow-flies orientation based upon the differences in X and Y coordinates for each TAZ of the trip interchange using the origin TAZ as the starting reference point. Once the direction of each trip interchange is determined for a given TAZ, the daily vehicle trips of that trip interchange as summarized from the SERPM trip matrixes are then assigned to one of the eight cardinal directions listed above. Next the process then summarizes the total number of vehicle trips by cardinal direction and then calculates the percentage of vehicle trips by direction of the total vehicle trips leaving from each origin TAZ. Intrazonal trips, trips assigned to stay within the same TAZ, are not factored into the percentage calculation for this analysis.

It should be noted, as stated above, that the directions of travel from a given TAZ to all other TAZs are determined only by the orientation of their centroid locations. This process does not consider the actual travel path to determine trip directions between TAZs. This important aspect of the program should be considered when using the output summary, specifically when analyzing an explicit TAZ trip interchange pair and the intuitive direction of travel immediately leaving a TAZ of origin. It should also be noted that the process is only used to calculate the direction of trips originating from a given zone.

PROCESS APPLICATION

A production run was made using the cardinal directional trip process for the Year 2015 validated model network and 2015 summarized total daily vehicle trip table. The output for the directional trip distribution for the Year 2015 validation simulation is provided in **Appendix A**. The directional trip distribution process can also be used for any of the future year simulation runs for analyzing the effects of changes in land use and transportation systems from that of the Base Year validation. **Appendix B** contains the cardinal distribution report for the 2045 Cost Feasible Plan network.
